b) an information processing apparatus including:  
an operating unit adapted to enter information;  
a processor adapted to process information entered at said operation unit;  
a display unit adapted to perform a display corresponding to data processed  
by said processor;  
a memory unit adapted to store images which were picked up by said image  
pickup unit; and  
an interface adapted to detachably connect said image pickup apparatus,  
wherein said information processing apparatus further includes:  
a detecting unit adapted to detect that said image pickup apparatus is  
connected; and  
a controller adapted to enable said display unit to display sequential  
images sent from said image pickup apparatus in a case that said detecting unit detects that  
said image pickup apparatus is connected, and to enable said display unit to display an  
image stored in said memory unit in a case that said detecting unit detects that said image  
pickup apparatus is not connected.

37. (Amended) An information processing apparatus, comprising:  
an operating unit adapted to enter information;  
a processor adapted to process information entered at said operating unit;  
a display unit adapted to performing a display corresponding to data  
processed by said processor;

an interface adapted to connect an image pickup apparatus, the image pickup apparatus being detachable from said interface;

a memory unit adapted to store images which have been picked up by said image pickup apparatus;

a detecting unit adapted to detect that the image pickup apparatus is connected; and

a controller adapted to enable said display unit to display sequential images sent from the image pickup apparatus in a case that said detecting unit detects that the image pickup apparatus is connected, and to enable said display unit to display an image stored in said memory unit in a case that said detecting unit detects that the image pickup apparatus is not connected.
